INTRODUCTION

1. Ice packs are used in Ice box for extending period (like 3 days) of cooling in Ice box. Ice box prevents outside heat from reaching the items to be kept cool.
2. Carry or store temperature sensitive items like Household, medical, agricultural and fisheries.

HOW TO USE

1. Easy Ice sheets are supplied in dry condition 30gms each. The first step is Hydration

HYDRATION

Put water filled mug to keep sheets dipped fully

Dry Easy Ice Sheet
30gm

Hydration in water in beginning
20 minutes or more

Hydrated Sheet
650gm 11 x 7inch

2. Take a small tub about 16" dia or kitchen top, fill with water. Dip dry Easy Ice sheets in the tub. At their own Sheets remain floating, to dip them, Place one or two water filled mug over the sheets. Let the sheets remain dipped end to end for 20 minutes or more. Plastic sheets absorb water **automatically** and each cell will swell about 2 cm thick. This completes hydration.
3. With absorbed water sheets become 600 to 700 gm each.
4. The hydrated sheets form gel in the cells. Hydration is required only at the starting. No need to repeat.

TO USE COLD

1. Place the hydrated sheets flat in freezer. Freeze at lowest temperature.

Freezer

Place sheets flat in freezer. One can stack sheets one over other. Set the freezer to the lowest temperature. Freeze till sheets are frozen hard.

When not in use, store sheets in freezer for ready availability.

2. The frozen sheets are now ready for use in Ice box, with items to be kept cool.
3. The sheets after few days in Ice box will revert to outside temperature, freeze & reuse the sheets.
4. Easy Ice Sheet are flexible & hygienic ice. It has long life. It does not melt & wet like ice. The outer surface of the ice pack are free from gel.

TO USE HOT

1. The hydrated Easy Ice sheets are Ok to heat. to temperature like 75°C. Place the hydrated sheet in microwave oven say for a minutes (depends on oven Kilowatt power) The heated sheets can be used to keep food items, milk bottle warm. The hydrated sheet can be dipped in boiled water for say 5 minutes and used as warmer. Once can reheat the sheets and use

Notes:

1. Place frozen sheets above and around items to be kept cool. Seal the ice box with a about 2-inch-wide tape. Open the box only when required and seal again to prevent air leakage.
2. Duration of cooling depend on quality of Ice box,(Ice box of wall thickness more than 2 Inch are better) cooling of items before insertion in ice box and times to box is opened.
3. When using sheets in contact with liquid, fish or meat, place frozen Easy Ice Sheet in a plastic zipper bag to prevent the possible absorption of any fluids.
4. Keeps the fridge cool during power failure, decreases power consumption by reducing frequent switching of compressor.
5. Often used as a gift item. It's very light and paper thin, insert in envelope and safely courier
